

Fix That Leak!

Fixing a toilet leak is a great way to reduce household water use and boost water conservation. It may even reduce your water and sewer costs! If your toilet has a leak, you could be wasting about 200 gallons of water every day. That would be like flushing your toilet more than 50 times for no reason! Try this experiment: test for leaks by placing a drop of food coloring in the toilet tank. If the color shows up in the bowl without flushing, you have a leak!
